**Test Result Summary**

<b>Clause</b>	<b>Test Item</b>	<b>Result</b>
FCC 15.203 and 15.204	Antenna Requirement	Pass
FCC 15.247(b) (3)	Maximum Peak Conducted Output Power	Pass
FCC 15.247(a) (2)	DTS Bandwidth	Pass
FCC 15.247(e)	Maximum Power Spectral Density	Pass
FCC 15.247(d)	Emissions in non-restricted frequency bands	Pass
FCC 15.209 / FCC 15.205	Spurious Radiated Emissions and Restricted Bands of Operation	Pass
FCC 15.207	Conducted emission test on a.c Power line	Pass

**Note:** Conducted measurements are done according to the procedure given in KDB No. **558074**  
**D01 DTS Meas Guidance v03r02**

## General Product Information

### Product Function and Intended Use

Wireless Vitals Monitor is a Non Invasive medical gadget that combines multiple vital physiological parameters into a small form factor device which gets controlled from a mobile device. Wireless Vitals Monitor is a cloud enabled solution. With Wireless Vitals Monitor your health vitals can be stored in your personal health cloud. For Wireless Vitals Monitor to be in your hands, all you need is any leading mobile device that operates with the compatible Operating System. It is used to measure the vital signs like Blood Pressure, Body temperature, Blood oxygen saturation level & Blood glucose, hemoglobin, cholesterol levels etc.

### Ratings and System Details

Operating Frequency Range	2400MHz – 2483.50MHz
No. of channel	40
Channel Spacing	2MHz
Transmitted Power	-14.24dBm
Number of antenna	One
Antenna Gain and Antenna type	0.5dBi and Trace Antenna
Supply Voltage to Module	5V DC from Power Charger
Environmental	Operational Temperature: 16°C to 35°C

### Test Conditions:

Supply Voltage: 5V DC from Power Charger

### Environmental conditions:

Temperature: +24.6 °C      RH: 55%

[www.tuv.com](http://www.tuv.com)

## **Test Set-up and Operation Mode**

### **Principle of Configuration Selection**

Transmission was enabled with 100% duty cycle on low, mid and high channel.

### **Test Operation and Test Software**

Test software was used to enable the transmission with 100% duty cycle, changing channels (low/mid/high) on the EUT for the tests in this report.

### **Special Accessories and Auxiliary Equipment**

- None

### **Countermeasures to achieve EMC Compliance**

- Testing was conducted with the Power adaptor cable connected to the AC mains (5v supply for charging EUT).

### **Test Modes – Data Rates and Modulations**

For Radiated spurious emissions, the tests were performed for all data rates and only worst case results are reported in this report.

For Conducted emission, the tests was performed, both in normal operating mode and channel selection mode in charging condition, power adaptor cable connected to AC mains. And only worst case results are reported in this report.

www.tuv.com

## Test Methodology

### Radiated Emission Test

The radiated emission measurement was performed according to the procedures in ANSI C63.10 - 2013. The equipment under test (EUT) was placed at the middle of the 80 cm high turntable for below 1GHz and 150 cm high turntable for above 1GHz, and the EUT is 3 meters far from the measuring antenna. The turntable was rotated 360° for obtaining the maximum emission. The height of the measuring antennas was scanned between 1m and 4m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations. Repeat the measurement steps until the maximum emissions were obtained. The measurement above 1000MHz was performed by horn antenna. The measurement below 30MHz was performed by loop antenna.

The EUT was rotated around the X-, Y-, and Z-Axis and the results from worst case axis are recorded.

### Conducted Emission Test on A.C. mains line

The equipment under test (EUT) was placed on a wooden table 80cm above the ground plane, the LISN was placed 80cm away from the EUT. The test was performed in accordance with ANSI C63.10 - 2013, with the following: an initial measurement was performed in peak and average detection mode on the live and neutral lines. The pre-scan was performed by peak detection on both live and neutral conductors. Any emissions recorded within 20dB of the relevant limit line were re-measured using quasi-peak and average detections, the 6 worst cases were recorded in the table of results.

## Test Results

### Antenna Requirement

Section 15.203 and 15.204

### Result

Pass

**FCC Requirement:** No antenna other than that furnished by the responsible party shall be used with the device. Permanently attached antenna is used in the device.

### Antenna details:

1. Antenna Type: Trace Antenna
2. Peak Gain: 0.5dBi

Requirement

FCC Part 15 Section 15.247(d)

Peak

In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.

**Test Method:**

**Test Result:**

Channel Frequency (MHz)	Value at Band Edge		Reference PSD Value B (dBm)	Band Edge Value A-B (dBc)	Limit (dBc)

Test Specification	FCC Part 15 Section 15.209 & 15.205
Test Method	ANSI C63.10-2013
Measurement Location	Semi Anechoic Chamber
Measuring Distance	3m
Detection	QP for frequency below 1GHz, Average for frequency above 1GHz
Requirement	As per the limits mentioned in the below table

**Limit for Radiated Emission of Section 15.209:**

Frequency (MHz)	Field strength (μV/m)	Field strength (dBμV/m)	Distance of Measurement (m)
0.009 – 0.490	2400/F(kHz)	48.50 – 13.80	300*
0.490 – 1.705	24000/F(kHz)	33.80 – 23.00	30*
1.705 -30	30	29.54	30*
30-88	100	40.0	3
88-216	150	43.5	3
216-960	200	46.0	3
Above 960	500	54.0	3

Remark: \* The limit shows in the table above of frequency range 0.009 – 0.490, 0.490 – 1.705 MHz and 1.705-30MHz is at 300 meter, 30 meter and 30 meter range respectively, which corresponds to 88.50 – 53.80, 53.80 – 43.00 and 49.5dBμV/m at 3m range by extrapolation calculation and the measurement of loop antenna.

The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9–90 kHz, 110–490 kHz and above 1000 MHz Radiated emission limits in these three bands are based on measurements employing an average detector.

www.tuv.com

## Test results:

For frequency Range 9kHz - 1 GHz

No emissions found in this frequency range.

For frequency above 1GHz

Test results for worst case data rate are listed below.
